Subject: GIS-Cityworks Platform Upgrade Qualifications

Dear Kim:

Please accept this letter as a summary of our unique qualifications to provide ongoing maintenance and support services for Cityworks integrations and customizations. As you look for a trusted service provider, consider these key factors that make POWER uniquely qualified to successfully perform this work for the City:

- » Developer of the current Cityworks integrations and customizations in production at the City. POWER designed, developed, tested and deployed the existing integrations and customizations supporting the City's Storeroom and Sidewalk Replacement business processes. POWER alone has the background knowledge of these solutions as well as the original developer of the functionality.
- » Developer of the custom POWER REST web service utilized by the integration between DPU-E ArcFM software and Cityworks. The web service manages and processes information between Cityworks and ArcFM and will need to be tested and possibly updated during future system upgrades. As the original developer of this solution, POWER has sole knowledge of the source code and is uniquely qualified to support these upgrades.

Thank you for considering POWER Engineers, Inc for this opportunity. Please let me know if you have any questions regarding the details outlined in our proposal letter. We look forward to your review and the opportunity to discuss any next steps at your convenience.

Sincerely,

A handwritten signature in grey ink, appearing to read "Emily Ranft", written in a cursive style.

Emily Ranft
Asset Management Consultant
