INJECTABLES - NEUROTOXINS

Skinovatio offers variety of leading, FDA approved injectable Neurotoxins such as Botox®, Xeomin®, Jeuveau and Dysport®.

Neurotoxins relax your facial muscles, so wrinkles and fine lines smooth out naturally.

If you're ready to reverse the signs of aging and erase years off your face, schedule a Botox consultation at Skinovatio Medical Spa today.

DERMAL FILLERS

Wrinkles and fine lines around the eyes, mouth, nose, and cheeks become more predominant as we age due to a lack of volume in the face. Skinovatio Medical Spa offers patients dermal fillers to smooth lines and wrinkles, boosting fullness in the face. Our simple injectable option of dermal fillers adds hydration to your lips and skin, offering long-lasting results. We'll help find the best dermal filler treatment for your skin to give your face a fuller, more youthful appearance.

You have plenty of options for dermal filler treatments at Skinovatio Medical Spa. Find out which types of dermal fillers are best for you by booking a free consultation with us.

PDO LIFTING THREADS

The PDO Thread Lift is a treatment which lifts and tightens sagging skin tissue, using threads made of Polydioxanone (PDO). The threads introduce them into the deeper layers of the skin. Once introduced, the threads produce 3 effects in the skin: Instant skin lifting, renewal through collagen stimulation, and neovascularisation to improve skin texture, fine lines and elasticity, skin tightening by contracting fat tissue.

About 6 months after the procedure the PDO threads will disappear through simple hydrolysis (they are absorbable). The lifted facial contours will remain for about 3-6 months more, due to the cellular rejuvenation effects. Your skin cells are stimulated to produce new collagen, and new blood vessels to improve skin microcirculation. At the same time, the PDO threads cause the fat tissue to contract, producing a skin tightening and facial slimming effect.

PRP

PLATELET RICH PLASMA - PRP

Platelet-rich plasma (PRP) is one of the most innovative cosmetic procedures available since it simply involves harnessing your body's ability to heal itself.

This treatment uses a client's blood to trick the body into healing itself.

At Skinovatio Medical Spa, we carefully extract the client's blood and then spin that blood to separate the plasma. From there, the plasma is injected back into the skin via a microneedle or needle.

PRP treatments are used to refresh the skin and make it look tighter and smoother.

The skin care experts at Skinovatio Medical Spa can help rejuvenate your skin and minimize the effects of aging with customized PRP treatments.

MICRONEEDLING

What Is Microneedling?

Microneedling is a cosmetic procedure. It involves pricking the skin with tiny sterilized needles. The small wounds cause your body to make more collagen and elastin, which heal your skin and help you look younger. You might also hear it called collagen induction therapy.

Microneedling with PRP uses the power of your blood's platelets to rejuvenate skin and reinvigorate cellular turnover. Platelets have the unique ability to rev up collagen and elastin production, which helps repair the following skin issues:

- Acne
- Hair loss (also called alopecia)
- Dark spots or patches on your skin (hyperpigmentation)
- Large pores
- Reduced skin elasticity
- Scars
- Stretch marks
- Sun damage
- Fine lines and wrinkles

By combining PRP therapy with microneedling, you'll enjoy more visible results in less time.

HYDRAFACIAL MD

Hydrafacial MD is a non-invasive, multi step treatments that combines the benefits of next-level hydradermabrasion, a chemical peel, automate painless extractions (no pinching!) and a special delivery of Antioxidants, Hyalouronic Acid and Peptides. It does all this in one quick treatment that delivers real results without downtime or irritation!

IS HYDRAFACIAL RIGHT FOR YOU? YES!

We don't have a type. HydraFacial addresses all skincare needs.

Fine lines + Wrinkles
Elasticity + Firmness
Even Tone + Vibrancy
Skin Texture
Brown Spots
Oily + Congested Skin
Enlarged Pores

HYDRAFACIAL IS FOR EVERYONE!

CELEB GLOW

FORMA STIMULATES THE
PRODUCTION OF NEW COLLAGEN
& IMPROVES SKIN ELASTICITY

FORMA - INNOVATIVE FACIAL CONTOURING

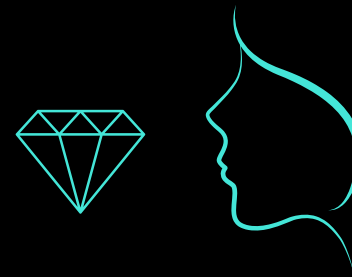

InMode's face and neck treatments contour and improve skin texture and complexion so you can live your most beautiful life with reduced downtime and no visible scarring.

How it works

InMode's facial treatments contour and improve the appearance of the face and neck to more defined facial characteristics and a younger, brighter appearance. During treatment, radiofrequency energy is delivered to remodel skin, fat and tissue, as well as address signs of aging, irregularities and pigmentation. The most in-demand zones include the eye area, forehead, cheeks, mouth (smile lines), jowls and neck. InMode's facial contouring solutions provide visible, natural results to the face and neck.

Forma uses radiofrequency energy with a thermal temperature sensor to heat skin in real-time to treat and improve skin and tissue to a more youthful appearance.

DIAMOND GLOW

It is a dermabrasion device that gently removes the top layer of skin and delivers topical cosmetic serums onto the skin.

DIAMOND GLOW - THE “YOU” FACTOR.

Unlike other treatments, DiamondGlow® is customized to you — combining a precision diamond tip to match your skin’s needs, targeted SkinMedica® Pro-Infusion Serums, and a perfectly curated, at-home SkinMedica® skincare regimen to keep your glow going.

The transformative power of DiamondGlow® starts in our signature wand. Built with our innovative 3X13 cross 1™ technology, the wand simultaneously exfoliates, extracts debris, and infuses the skin with professional-grade SkinMedica® Pro-Infusion Serums, when pores are open and most receptive.

THE DIFFERENCE IS IN THE DIAMOND.

The six DiamondGlow® diamond tips allow your Aesthetic Provider to customize your treatment to suit your skin. Each tip is specifically designed for maximum efficacy and exfoliation for specific skin concerns.

SKINMEDICA® SERUMS— AS UNIQUE AS YOUR SKIN.

The science and research that go into SkinMedica® Pro-Infusion Serums deliver exceptional skincare with truly meaningful results. DiamondGlow® is designed to work with SkinMedica® Pro-Infusion serums tailored to specific skin concerns for a highly-customizable treatment. All of our SkinMedica® Pro-Infusion Serums are sulphate/sulphite-free, paraben-free, and fragrance-free.

DERMAPLANING

Also known as blading, is a safe and simple skin rejuvenation treatment intended to exfoliate the epidermis and remove vellus hairs (peach fuzz), leaving the skin smoother and looking healthier.

This exfoliation allows for your skincare products to penetrate more readily into the deeper layers.

Dermaplaning is an ideal treatment for those with excess vellous hair because this hair often causes dirt and oil to clog in the follicles. Removing this hair gives the patient healthier looking skin.

This is the perfect add on for many aesthetic procedures including laser, microneedling, superficial chemical peels and facials.

Dermaplaning is also a prime exfoliation treatment option for those who are pregnant or nursing and not allowed to use chemical peeling agents. Patients often wonder if their hair will grow back thicker and darker after dermaplaning. This is simply a myth. As long as the hair is superficial vellus hair, it will continue to grow back at the same rate and texture as it did prior to treatment.

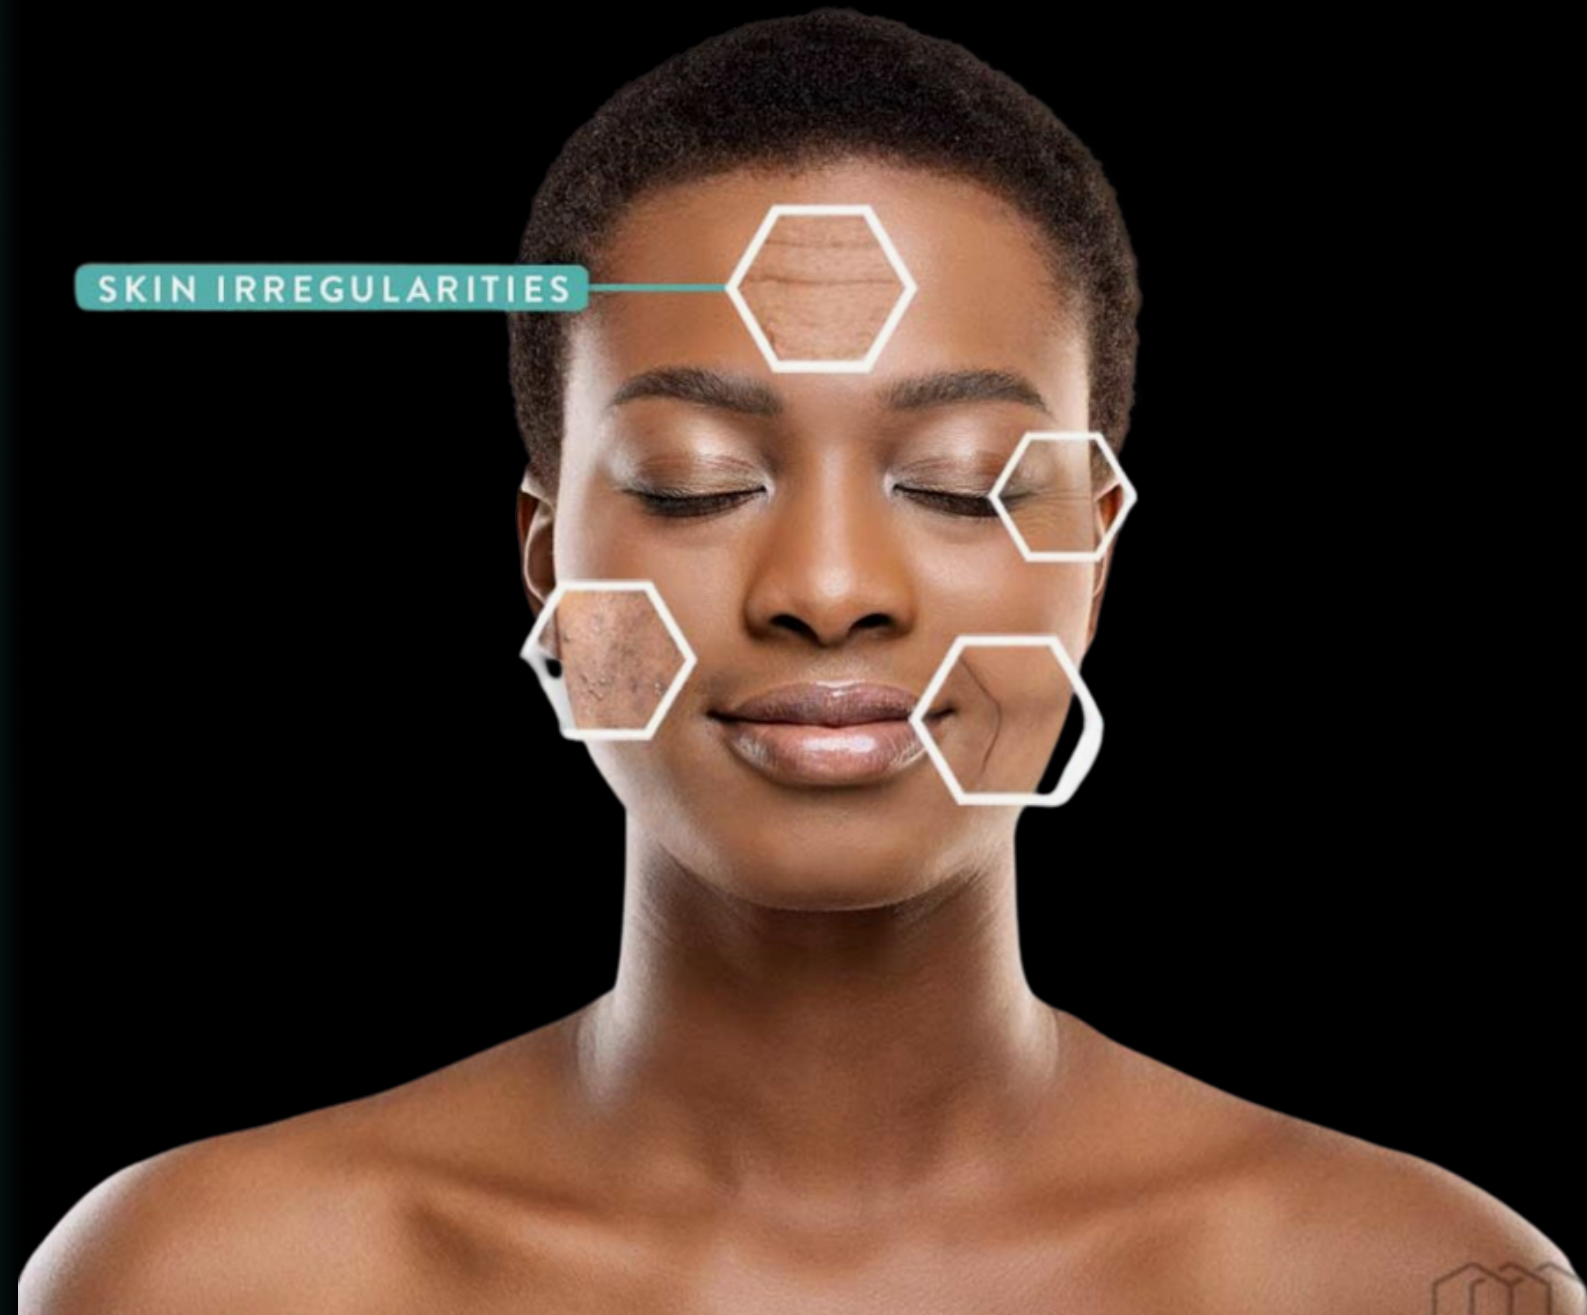

CHEMICAL PEELS

Chemical peels are cosmetic treatments that can be applied to the face, hands, and neck. They're used to improve the appearance or feel of the skin.

During this procedure, chemical solutions will be applied to the area being treated, which causes the skin to exfoliate and eventually peel off. Once this happens, the new skin underneath is often smoother, appears less wrinkled, and may have less damage.

There are a number of reasons people may get chemical peels. They may be trying to treat a variety of things, including: wrinkles and fine lines, sun damage, acne scars, hyperpigmentation scars, melasma, uneven skin tone or redness.

MORPHEUS 8

WWW.SKINOVATIO.COM

MORPHEUS8 FACIAL AND BODY TREATMENT

Morpheus8 is a revolutionary skin treatment that combines microneedling with radiofrequency technology to change the look and feel of your skin. Skinovatio Medical Spa offers Chicago, IL patients Morpheus8 treatments to promote skin healing and create new skin cells. The combination of

Morpheus8's microneedling healing response and radiofrequency energy's heat leads to remodeled tissues that thicken and tighten the skin. Morpheus8 treatments are FDA approved as a Subdermal Adipose Remodeling Device (SARD) to eliminate fat in delicate areas.

What Can Morpheus8 Treat?

Morpheus8 treats many facial and neck concerns, including:

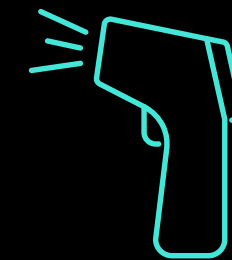

- Acne scarring
- Skin texture
- Fat accumulation beneath the chin
- Sun damage
- Deep lines
- Stretch marks
- Enlarged pores

Benefits of Morpheus8:

Some of the most significant benefits of Morpheus 8 include:

- Lifts and tightens loose skin
- Reduces the appearance of sagging skin
- Minimizes stretch marks
- Improves skin tone
- Minimizes acne scarring
- Little to no downtime
- Reduces wrinkles
- Minimizes scar tissue
- Better skin texture

IPL PHOTO REJUVENATION

An intense pulsed light (IPL).

If sun damage or age spots affect your confidence, IPL might be the perfect answer. Skinovatio Medical Spa offers IPL treatments to our Chicago, IL patients to boost their complexion and skin clarity. Lumecca uses intense pulsed light (IPL) to treat problem areas quickly and effectively. Using photothermolysis, the comfortable light treatment provides a confidence-boosting photofacial. IPL delivers up to three times more energy in the 500-600 nm range for outstanding results. In just one to three sessions, patients see drastic results. Contact us for a consultation.

A Photo Facial, is a 30 min procedure in which intense pulses of light are used to penetrate deep in to the skin.

IPL Photorejuvenation then causes collagen and blood vessels below the epidermis to constrict, reducing redness, red spots, sun damage and age lines.

Laser Hair Removal prevents your skin from razor rash or ingrown hairs. It's virtually pain free and super affordable!

LASER HAIR REMOVAL

Imagine all the time you'd save each day if you didn't have to worry about waxing, shaving, or plucking. At Skinovatio Medical Spa your dream can become a reality with laser hair removal treatments.

How does laser hair removal work?

Laser hair removal involves exposing your hair follicles to intense bursts of light. This light energy is absorbed by pigments in the growth center of your hair, causing an intense heat reaction, which stops the hair growth cycle instantly.

Over the following couple of weeks, all of that destroyed hair sheds away with each passing day. New hair does come back eventually, but it's finer and lighter. In order to target every hair as it's growing you need to have multiple laser sessions.

Laser hair removal is safe and effective for dramatically reducing hair just about anywhere on your body. At SKINOVATIO some of the top-requested treatment areas include: neck, back, abdomen, underarms, legs or arms, upper lip and chin, pubic area (bikini line).

HYDRAJELLY MASKS

These masks start off in powdered form and are activated with purified water for each application. As the water mixes with the powder, it forms a liquid “jelly” that is applied to the area. After about 15-20 minutes, the hydrojelly solidifies, creating a vacuum seal that pushes all the beneficial, yummy ingredients into your skin’s pores. After that it can then be peeled off with little to no residue.

Each mask is infused with electrolytes derived from algae that benefit your skin by helping achieve a natural moisture balance, resulting in healthy, hydrated, and supple looking skin.

These hydrojelly masks have incredible soothing and calming effects – the perfect way to put the finishing touch on a facial, microneedling session, or derma planing treatment.

I LIPO LASER

Because of the groundbreaking technology behind iLipo, you can sculpt and contour your body, without going through pain or surgery.

I Lipo Q & A

How does iLipo work?

As a noninvasive alternative to traditional liposuction surgery, iLipo is an innovative way to melt away unwanted body fat. The iLipo system involves exposing your treatment areas to low-level lasers to trigger a photobiomodulation effect. This process stimulates adipose (fat) tissue functions by releasing a lipase enzyme, which forces fat cells to release their stored content.

As fat cells release built-up triglycerides, they transform into free fatty acids and glycerol. These are very small compounds that are easily metabolized by your body for energy. Over time, your treated areas become more contoured and defined as fat cells gradually dissolve.

What happens during an iLipo session?

During your iLipo session at SKINOVATIO, you simply lie back as your dedicated body sculpting specialist applies the laser pads to your treatment areas. As the iLipo laser works to release fat, you may feel a gentle warming sensation, but at no time should you be in pain or discomfort during this noninvasive liposuction procedure. The laser pads need to stay in place for 10 minutes per treatment area.

By the end of your session, you're going to have lots of smaller fat molecules floating through your body that need to be burned off. This is why it's important to exercise immediately after your session by getting on a stationary bike or going for a brisk walk for several minutes.

Because there is no downtime with iLipo, you can return to all of your normal activities — including work — right afterward.

When will I have results with iLipo?

Getting the body of your dreams and resolving any of those stubborn fatty areas involves undergoing a series of iLipo sessions at SKINOVATIO. After your very first iLipo session, you can experience up to a 30% reduction in fat in the targeted area. You can achieve even more fat loss after completing a series of treatments. Usually, the body contouring team at SKINOVATIO recommend packages of eight treatments, which should be conducted over a four-week period. By the end of your iLipo treatment package, you can lose at least one or two pants or dress sizes!

WHAT IS EMSCULPT:

EMSCULPT is the first device to build muscle and sculpt your body. Through the high intensity electromagnetic therapy procedure one can enlarge current muscles, as well as grow new muscle fibers. The Emsculpt procedure is currently FDA cleared to treat your abdominals, buttocks, arms, calves and thighs. A great non-surgical alternative to the brazilian butt lift.

How Does EMSCULPT work?

EMSCULPT is based on high-intensity focused electromagnetic energy. A single **EMSCULPT** session causes thousands of powerful muscle contractions which are extremely important in improving the tone and strength of your muscles. These powerful induced muscle contractions not achievable through voluntary contractions. The muscle tissue is forced to adapt to such extreme condition. It responds with a deep remodeling of its inner structure that results in muscle building and sculpting your body.

Long-Lasting Results

While diet and exercise are obviously good lifestyle habits to have for the sake of your health, it is often the case that the body reaches a plateau at some point. These plateaus can mean that your lifestyle habits are no longer effective or that your body is quicker to backslide to where you started, and that means that the results you worked so hard for might not last for long.

Body sculpting treatments are different. Because of the techniques and technology that is used to contour the body, cosmetic treatments for the body usually have reliably long-lasting results. When performed by a skilled hand and combined with a healthy lifestyle, body sculpting treatments can last for several months to even years at a time.

EMSCULPT

VELASHAPE

VelaShape combines various energies like bipolar radio frequency and infrared light with a vacuum component to improve cellulite, tone the skin, and shrink fat cells. From your first VelaShape treatment, your skin appears tighter, firmer, and smoother. Results become most apparent six to eight weeks later, after you have undergone about six treatments.

Though it works on all skin types and tones, VelaShape results can vary. You're a good candidate if you have a Body Mass Index (BMI) of less than 30 and you fall under cellulite classification stages one or two. Stage-one cellulite shows no dimpling as you stand or lie down. A pinch test, however, reveals an orange peel-like appearance. Stage-two cellulite dimpling appears spontaneously when you stand but not when you lie down. If these criteria don't describe you, you can still benefit from VelaShape. But the results will be less dramatic.

The infrared light and radiofrequency energies heat with precision dermal and hypodermal tissue in the treatment area. This boosts metabolism of fat cells and reduces their number. In this way it reduces cellulite. Mechanical massage rollers gently knead the treated area. This increases circulation, encourages lymph drainage, and reduces fat-cell byproducts and toxins. Vacuum suction smooths out dimples by stretching fibrous bands in your topmost layer of skin (epidermis). This reduces the appearance of cellulite.

WHAT IS ENDERMOLOGIE LIPOMASSAGE?

Endermologie lipomassage is a treatment that is non-invasive and attacks the cellulite on your body. The treatment consists of about 10 sessions and results have been seen after about 6 treatments.

The sessions themselves last about 45 minutes. The hand-held massage roller is used by rolling the head over the desired areas. While kneading the skin, the massage roller sucks up the skin along with soft tissue. The manipulation of the skin is not only a way to treat cellulite, but also a way to increase blood flow, pull excess water from the body, and increase circulation. The fat, along with toxins, are also carried away with the water leaving the body.

Reduces cellulite appearance, reduces stretch marks, helps with body shaping, best for unevenness caused by Liposuction, promotes skin firmness.
