#### Status Key:

S - SAVE - To Be Preserved R - REMOVE

#### **Condition Rating Key:**

Rating	<u>Description</u>	General Criteria
5	Excellent	The tree is typical of the species, has less than 10% deadwood in the crown that is attributable to normal causes, has no other observed problems, and requires no remedial action
4	Good	The tree is typical of the species and / or has less than 20% deadwood in the crown, only 1 or 2 minor problems that are easily corrected with normal care.
3	Fair	The tree is typical of the species and / or has less than 40% deadwood in the crown, only 1 or 2 minor problems that are not imminently lethal to the tree and no significant decay or significant decay or structural problems, but the tree must have remedial care above normal care in order to minimize the impact of future stress and to ensure continued health.
2	Poor	The tree is not typical of the species and / or has over 50% deadwood in the crown, major decay structural problems, is hazardous or is severely involved with insects, disease, or other problems that even if aggressively corected would not result in the long term survival of the tree.
1	Dead	Less than 10% of the tree shows signs of life
