TRANSPORTATION ADVISORY BOARD AGENDA ITEM

ACTION REQUESTED:

Provide input on city wide traffic calming measures

DEPARTMENT: Transportation, Engineering and Development

SUBMITTED BY: Michael Prousa, Project Manager

BACKGROUND:

The city has hired Kenig, Lindgren, O'Hara, Aboona, Inc. (KLOA) to develop a traffic calming toolkit that can be used throughout Naperville for various traffic studies. In the past, the city has used a variety of sources for deciding on the best course of action for a traffic request response. With the development of a traffic calming toolkit we will be able to be more responsive and consistent across the city when responding to traffic requests.

DISCUSSION:

Staff will provide an overview of the tools that are going to be in the traffic calming toolkit and what thresholds would have to be met for these tools to be used. Another topic will be the tools that the city will not be implementing into the traffic calming toolkit and the reasons for why they are not included.
